

SUMMARY:

Business Data Analyst with **5+ years of experience** analyzing data and supporting business decision-making across data-intensive environments. Skilled in requirements gathering, process analysis, and translating business needs into actionable insights. Strong hands-on experience with SQL, data analysis, dashboards, and reporting, with a focus on **data governance, data quality, and data integrity**. Experienced in CRM administration along with data dictionary and metadata management to improve data transparency and usability.

CORE COMPETENCIES: Data Analysis, SQL, Data Governance, Data Quality & Integrity, Metadata Management, CRM Administration, Requirements Gathering, Data Validation

EDUCATION:

Cleveland State University, Cleveland, OH (GPA 3.87)

May 2025

Master of Science in Information Systems (**Relevant Focus:** Cloud Computing, Business Data Analytics, Data Engineering, AI Systems)

Anna University, Chennai, India Bachelors in Electronics and Communication Engineering

May 2019

TECHNICAL PROFICIENCIES:

Programming Languages: SQL, Python (Pandas, NumPy)

Data Analysis & Reporting: Advanced Excel, Power BI (Dashboard development, data modeling, DAX), Tableau, Grafana

Process Improvement Tools: Root Cause Analysis, Process Mapping, Workflow Optimization, Lean Principles, KPI Tracking, Cost-Benefit Analysis

Database Management: Microsoft SQL Server, MySQL, Azure SQL

Cloud and Data Platforms: AWS (S3, ECS, Lambda), Azure (Azure ML, Blob Storage), Snowflake, ETL Pipelines

Business Analysis: Requirements gathering, solution assessment, process modeling (Visio, Lucid chart), UAT, stakeholder management.

Tools & Methodologies: Agile (Scrum, Kanban), Jira, Azure DevOps, Git, GitHub, SDLC, CI/CD pipelines.

PROFESSIONAL EXPERIENCE:

Business Data Analyst (Volunteer)– Chicago Education Advocacy Cooperative– Chicago, USA

Jul 2025 – Present

- Analyzed student attendance, academic performance, and counseling data to identify behavioral trends and root causes of performance issues.
- Integrated **structured and unstructured data sources** to improve reporting accuracy and support operational decision making.
- Developed **Power BI dashboards** to track KPIs, improving visibility into performance metrics and enabling data-driven decisions
- Defined and monitored KPIs to evaluate program effectiveness and support continuous improvement initiatives
- Ensured data quality and integrity through SQL-based validation, data cleansing, and automated workflows
- Analyzed **end-to-end data flows** across multiple systems to ensure consistency, accuracy, and reliable reporting outputs
- Maintained data documentation, including reporting logic, workflows, and data definitions, to support standardization and metadata management
- Queried and analyzed data from cloud data warehouses (e.g., Snowflake) to support reporting and insights
- Performed trend analysis and basic forecasting to help stakeholders anticipate student support needs and optimize interventions
- Collaborated with cross-functional teams to identify data gaps, improve reporting processes, and enhance system efficiency
- Supported program managers with cost-benefit and resource allocation analysis to optimize program impact and decision-making

Technical Business Analyst Particle Black – Chennai, India

Nov 2022 – Apr 2023

- Led requirements elicitation and **translated business needs into clear functional and technical specifications**
- Created data flow diagrams, process maps, and system documentation to support solution design and improve process transparency
- Used SQL and data analysis techniques to validate system outputs, identify discrepancies, and troubleshoot data-related issues
- Supported system implementations and enhancements, ensuring smooth delivery and alignment with business requirements
- Analyzed and validated REST API responses (JSON/XML) to ensure accurate data extraction and consistency across reporting and integrated systems.
- Owned **end-to-end UAT cycles**, including test case design, execution, defect tracking, and validation of system changes
- Collaborated with engineering teams to support system integrations, data workflows, and process automation initiatives
- Analyzed end-to-end business workflows to **identify bottlenecks** and recommend process improvements for increased efficiency
- Performed cost-benefit analysis to evaluate technical solutions and process improvement initiatives
- Managed user stories, sprint tasks, and backlog prioritization using Jira and Azure DevOps within Agile environments
- Coordinated release cycles and CI/CD deployments, ensuring successful implementation and post-release validation
- Partnered with cross-functional stakeholders to deliver projects on time and align outcomes with business goals

Business Data Analyst Elixir Softlab Solutions– Chennai, India

Jan 2018 - Nov 2022

- Analyzed operational and performance data using **SQL and Excel** to identify process inefficiencies and root causes of delays.
- Conducted **business process mapping and workflow analysis**, documenting current and future state processes.
- Developed **KPI dashboards and ad-hoc reports** in Excel and Power BI to support management decision-making.
- Improved reporting efficiency by 30% through automation and process optimization.**
- Performed **trend and forecasting analysis** to support resource planning and business projections.
- Ensured data quality and integrity through data validation, cleansing, and consistency checks across reporting systems
- Created and maintained process documentation, including flowcharts, templates, and SOPs, to support standardization and knowledge sharing
- Supported system implementation and deployment activities, including data preparation, testing, and end-user training
- Presented data-driven insights and recommendations to stakeholders, enabling informed decision-making and improved business outcomes

CERTIFICATIONS:

- AWS Certified Solutions Architect - Associate [credential](#)
