

Latha Matthe
Business Systems Analyst | Data & Process Analytics | CRM and Workflow Integration
Cleveland, OH | mailid@gmail.com | 123456789 | Ready to Relocate

SUMMARY:

Business systems and Data Analyst with **5+ years of experience** analyzing data and supporting business decision-making across data-intensive environments. Skilled in requirements gathering, process analysis, and translating business needs into actionable insights. Strong hands-on experience with SQL, data analysis, dashboards, and reporting, with a focus on **data governance, data quality, and data integrity**. Experienced in CRM administration along with data dictionary and metadata management to improve data transparency and usability. Proven ability to drive measurable outcomes through KPI definition, data mapping, data validation, and cross-functional collaboration within Agile environments.

CORE COMPETENCIES: Business Analysis • Requirements Gathering • Data Analysis • System Implementation • UAT & Testing • Workflow Optimization • Data Validation • Stakeholder Management • System Integration

EDUCATION:

Cleveland State University, Cleveland, OH (GPA 3.87)

May 2025

Master of Science in Information Systems (**Relevant Focus:** Cloud Computing, Business Data Analytics, Data Engineering, AI Systems)

Anna University, Chennai, India Bachelors in Electronics and Communication Engineering

May 2019

TECHNICAL PROFICIENCIES:

Programming Languages: SQL, Python (Pandas, NumPy)

Data Analysis & Reporting: Advanced Excel, Power BI (Dashboard development, data modeling, DAX), Tableau

Process Improvement Tools: Root Cause Analysis, Process Mapping, Workflow Optimization, Lean Principles, KPI Tracking, Cost-Benefit Analysis

Database Management: Microsoft SQL Server, MySQL, Azure SQL

Systems & Integration: Data integration workflows, REST APIs, JSON, XML, Data flows & system interactions

Cloud Platforms: AWS (S3, ECS, Lambda), Azure (Azure ML, Blob Storage)

Business Analysis: Requirements gathering, solution assessment, process modeling (Visio, Lucid chart), UAT, stakeholder management.

Tools & Methodologies: Agile (Scrum, Kanban), Jira, Azure DevOps, Git, GitHub, SDLC, CI/CD pipelines.

PROFESSIONAL EXPERIENCE:

Business Data Analyst (Volunteer)– Chicago Education Advocacy Cooperative– Chicago, USA

Jul 2025 – Present

- Analyzed student attendance, academic performance, and counseling data to identify behavioral trends and root causes of performance issues.
- Integrated **structured and unstructured data sources** to improve reporting accuracy and support operational decision making.
- Developed **Power BI dashboards** to track KPIs, improving visibility into performance metrics and enabling data-driven decisions
- Defined and monitored KPIs to evaluate program effectiveness and support continuous improvement initiatives
- Ensured data quality and integrity through SQL-based validation, data cleansing, and automated workflows
- Analyzed **end-to-end data flows** across multiple systems to ensure consistency, accuracy, and reliable reporting outputs
- Maintained data documentation, including reporting logic, workflows, and data definitions, to support standardization and metadata management
- Performed trend analysis and basic forecasting to help stakeholders anticipate student support needs and optimize interventions
- Collaborated with cross-functional teams to identify data gaps, improve reporting processes, and enhance system efficiency
- Supported program managers with cost-benefit and resource allocation analysis to optimize program impact and decision-making

Technical Business Analyst Particle Black – Chennai, India

Nov 2022 – Apr 2023

- Led requirements elicitation and **translated business needs into clear functional and technical specifications**
- Created data flow diagrams, process maps, and system documentation to support solution design and improve process transparency
- Used SQL and data analysis techniques to validate system outputs, identify discrepancies, and troubleshoot data-related issues
- Supported system implementations and enhancements, ensuring smooth delivery and alignment with business requirements
- Analyzed and validated **REST API responses** to ensure accurate data exchange between integrated systems
- Collaborated with technical teams to support API-based system integrations and data workflows
- Owned **end-to-end UAT cycles**, including test case design, execution, defect tracking, and validation of system changes
- Collaborated with engineering teams to support system integrations, data workflows, and process automation initiatives
- Analyzed end-to-end business workflows to **identify bottlenecks** and recommend process improvements for increased efficiency
- Performed cost-benefit analysis to evaluate technical solutions and process improvement initiatives
- Managed user stories, sprint tasks, and backlog prioritization using Jira and Azure DevOps within Agile environments
- Coordinated release cycles and CI/CD deployments, ensuring successful implementation and post-release validation
- Partnered with cross-functional stakeholders to deliver projects on time and align outcomes with business goals

Business Data Analyst Elixir Softilab Solutions– Chennai, India

Jan 2018– Nov 2022

- Analyzed operational and performance data using **SQL and Excel** to identify process inefficiencies and root causes of delays.
- Conducted **business process mapping and workflow analysis**, documenting current and future state processes.
- Developed **KPI dashboards and ad-hoc reports** in Excel and Power BI to support management decision-making.

- **Improved reporting efficiency by 30% through automation and process optimization.**
- Performed **trend and forecasting analysis** to support resource planning and business projections.
- Ensured data **quality and integrity through data validation**, cleansing, and consistency checks across reporting systems
- Created and maintained process documentation, including flowcharts, templates, and SOPs, to support standardization and knowledge sharing
- Supported system implementation and deployment activities, including data preparation, testing, and end-user training
- Presented data-driven insights and recommendations to stakeholders, enabling informed decision-making and improved business outcomes

ACADEMIC PROJECTS:

E-Commerce Packaging Optimization using Power BI

January 2025 – May 2025

- Used Power BI to visualize packaging cost, delivery time, and sustainability KPIs across thousands of orders.
- Integrated Excel Based Forecasting and SQL derived Metrics for actionable dashboards

Customer Churn Prediction

November 2024

- Developed a customer churn prediction model using Decision Trees to analyze customer data, identify key churn drivers, and improve retention strategies, achieving a 15% reduction in churn.
- Utilized Python (Pandas, Scikit-learn), Tableau, and SQL for data processing, modeling, and visualization.

Bank Marketing Analytics

April 2024

- Predicted the likelihood of term deposits post-marketing campaigns using Decision Trees and Logistic Regression, achieving an F1-score of 0.76 and an AUC of 0.85.
- Performed data preprocessing, including log transformations and SMOTE, increasing the dataset size from 41,188 to 73,096 rows for balanced modeling.
- Utilized Python libraries (Pandas, Sklearn, Imblearn, Feature_engine, Mlxtend) and Graphviz to enhance model accuracy and interpretability.

Coursera Sales Data Analysis & Visualization

September 2023

- Developed interactive dashboards in Tableau to analyze course popularity, enrollment trends, and organizational performance using a Kaggle dataset.
- Highlighted patterns reflecting student engagement and course quality in course ratings, student engagement, and organization performance

CERTIFICATIONS:

- AWS Certified Solutions Architect - Associate [credential](#)
- Awarded \$6000 Monte Ahuja Scholarship for Academic Excellence

ELIGIBILITY:

Eligible to work in the United States of America with valid work Authorization
